Portfolio

SUMMARY

- Computer Science Engineering undergraduate specializing in Artificial Intelligence with hands-on experience in full-stack development using React.js, Node.js, Express.js, MongoDB and SQL. Strong foundation in Data Structures, Algorithms, OOP, CN, and DBMS, with experience building scalable web applications and AI-powered solutions.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend: Node.js, Express.js, FastAPI, RESTful APIs, JWT

Databases: MongoDB, SQL

Cloud Virtualization: AWS

AI / Machine Learning: Machine Learning, Deep Learning, TensorFlow.js, Scikit-learn, Object Detection (YOLO), Model Training & Evaluation

Tools & Platforms: Git, GitHub, Postman, PowerShell

Relevant Coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Software Engineering

PROJECTS

Sepsis AI Risk Prediction | MERN Full Stack, ML Model

Live Demo | GitHub

- Developed a full-stack web application to solve early detection and monitoring of sepsis risk using clinical patient data and machine learning predictions.
- Implemented key features including patient registration and login, sepsis risk prediction, doctor/patient dashboards, medical history tracking, and real-time alert visualization.
- Integrated REST APIs and database functionality using React for the frontend, Node.js and Express for the backend, MongoDB with Mongoose for data storage, and a Python FastAPI ML service for sepsis prediction.
- Optimized the application for performance, responsiveness, and user-friendly experience through a modern Vite-based frontend, role-based workflows, interactive charts, and streamlined access to patient and prediction data.

AI-Powered Placement Preparation Assistant | Full Stack, RAG Model

Live Demo | GitHub

- Developed a full-stack RAG assistant using Google Gemini and FastAPI that answers interview questions based on real study materials and shows exact page numbers for reference.
- Added smart PDF search using Sentence-Transformers and Qdrant Vector DB, allowing students to upload and query syllabus guides and interview experiences.
- Developed a secure backend with Node.js, Express, and PostgreSQL to manage user login/signup, save chat history, and keep uploaded documents private.
- Created a responsive React frontend featuring company-wise filters (TCS, Amazon, Google, etc.), past chat search, and clean formatted answers.

MPLADS Fund Utilization Anomaly Detection System | Data Science, Isolation Forest

Live Demo | GitHub

- Built an end-to-end pipeline integrating five public MPLADS government datasets across 11,000+ records, using regex-based ID normalization to join inconsistently formatted identifiers.
- Trained an Isolation Forest model on engineered features (cost deviation, sanction delay, status) to flag statistically unusual fund-utilization patterns.
- Identified and fixed a data-quality bug causing unstable outlier scores in small-sample categories, improving score reliability across the dataset.
- Generated an interpretable 0–100 risk score with automated, human-readable justifications for each flagged case, prioritizing explainability over black-box scoring.

EDUCATION

Bachelor of Technology in Computer Science Engineering (Artificial Intelligence)

August 2023 – 2027

Rungta College of Engineering and Technology (CSVТУ)

– 7.98 CGPA

CERTIFICATES / EXTRACURRICULAR

- * **Data Structures and Algorithms:** Solved over 300+ problems on [LeetCode](#), and [GeeksForGeeks](#).
- * **MERN Full Stack Certificate:** officially certified by Coding Spoon after successfully demonstrating strong skills, knowledge, and core competencies in this domain. [Certificate](#)
- * **GDSC:** Develop GenAI Apps with Gemini and Streamlit [Certificate](#)
